PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student at Newton School of Technology with hands-on experience in full-stack web development, AI/ML prototyping, and IoT/robotics. Proficient in Python, JavaScript, and React, Node , Express , Postgres with a strong interest in emerging technologies. Demonstrated ability to lead cross-functional teams in hackathons, deliver production-inspired projects from concept to demo, and consistently earn strong client satisfaction as a freelance product designer

EDUCATION

Year	Degree/Exam	Institute	CGPA/Marks
2025-2029	Bachelor of Technology (Computer Science)	Newton school of technology , SVYASA University	7.91/10.0
2024-2025	Intermediate (Class XII)	GUJARAT PUBLIC SCHOOL	65.7%
2022-2023	Matriculation (Class X)	BRIGHT DAY SCHOOL	87.0%

PROJECTS

UniBuddy — Connect with seniors of tier 1 colleges (Github) (Demo) October 2026

- Built **UniBuddy**, a campus discovery and navigation web app designed to help new students connect with seniors from tier 1 colleges and learn skills from them.
- Developed a responsive React interface with reusable components, modular screens, and shared contexts for language preferences, camera functionality, and saved routes.
- Integrated interactive campus maps using Leaflet, with location markers, walking-route visualization, and guided tours through recommended destinations.
- Deployed the application on Vercel and maintained the source code on GitHub.

Household Waste Classification using AI (Github) September 2026

- Built an AI-powered household waste classification system to identify recyclable materials and support better waste segregation and scrap-value discovery.
- Fine-tuned a **ResNet50 CNN** on 15,870 images across 10 waste categories, achieving **97.53% accuracy** and **99.68% top-3 accuracy** on a held-out test set.
- Designed a two-stage training pipeline with stratified, duplicate-aware dataset splits, class weighting, data augmentation, and confidence-threshold analysis.
- Exported the trained model to **ONNX**, achieving **12.04 ms average inference latency** per image on an Apple M4 CPU.
- Developed a Python CLI prediction tool with structured JSON output and uncertainty handling for low-confidence classifications.

SKILLS

- **Programming Languages:** Python, JavaScript
- **Web / Application Development:** React, Node.js, Express JS
- **AI / ML / GenAI:** LLM, LangChain, PyTorch
- **Data & Databases:** PostgreSQL, MongoDB
- **Cloud / DevOps / Infrastructure:** AWS, Linux
- **Systems / Core CS:** Data Structures and Algorithms, DBMS
- **Developer Tools:** Git and Github, YOLO vs. Faster R-CNN
